

# Corporate Logo

Hello and thank you for purchasing Corporate Logo Intro. This is an overview on how to navigate your way around this template.

## The Steps

The steps are pretty simple, just go in order from which you see in the timeline. [Logo Placeholder](#), [Text Placeholder](#), [Final Render](#).

### **Step 1: Logo Insert**

Enter your logo into the project panel, and then into the Logo Placeholder timeline. Be sure to scale up, down, or position as needed.

### **Step 2: Text Edit**

Go to Text Placeholder tab and either double click on text, or go to horizontal type tool and edit your text.

### **Step 3: Final Render (The finishes)**

Now that you've inserted your logo and text, you can go to Final Render tab for the finishing touches. There are FX Controls that allows you to change the look of your logo and scene:

**Logo Face Softness/Smoothness/Edge Details/Bevel Amnt/Edge Roundness** allows you to control how sharp or soft you want the details of your logo to be, and how sharp or round you want the outline of the logo to be. These may need to be changed depending on your taste and logo, but the default settings is generally ok for all logos. **BG Color** is simply to change the color of your background, and **Flare Color** is to change the lighting/flare/ambience of the logo.

Once you're done making your adjustments, you can now render out your project by going to Composition >> Add to Render Queue >> and select your settings!

## Misc.

If you have any questions or concerns, or need any special assistance, contact me in through email via [www.videohive.net/ZeroLink](http://www.videohive.net/ZeroLink) If you guys have any recommendations on this project, drop a comment on the item page and I'll respond. Thank you guys and good luck!
